Omicron BA.5 Now Dominant Spreading Covid-19

The Omicron BA.5 subvariant is now the dominant strain of Covid-19, according to the Centers for Disease Control and Prevention. There are indications reinfections and hospitalizations are increasing.

Is It Important To Get Tested? YES!

It remains important to get tested if you're feeling sick or if you find that you were close to someone who tests positive.

If You Test Positive, How Long Must You Isolate?

If you test positive for Covid-19 or have symptoms, regardless of vaccination status:

Stay Home For At Least 5 days

Stay home for 5 days and isolate from others in your home. Wear a well-fitting mask if you must be around others in your home.

You May End Isolation After 5 Days, If:

You are fever-free for 24 hours (without the use of fever-reducing medication) and your symptoms are improving.

Take Precautions Until Day 10

Wear a well-fitting mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.

Do not travel until a full 10 days after your symptoms started or the date your positive test was taken if you had no symptoms.
